

# REMOTE PRODUCTIVITY MONITORING

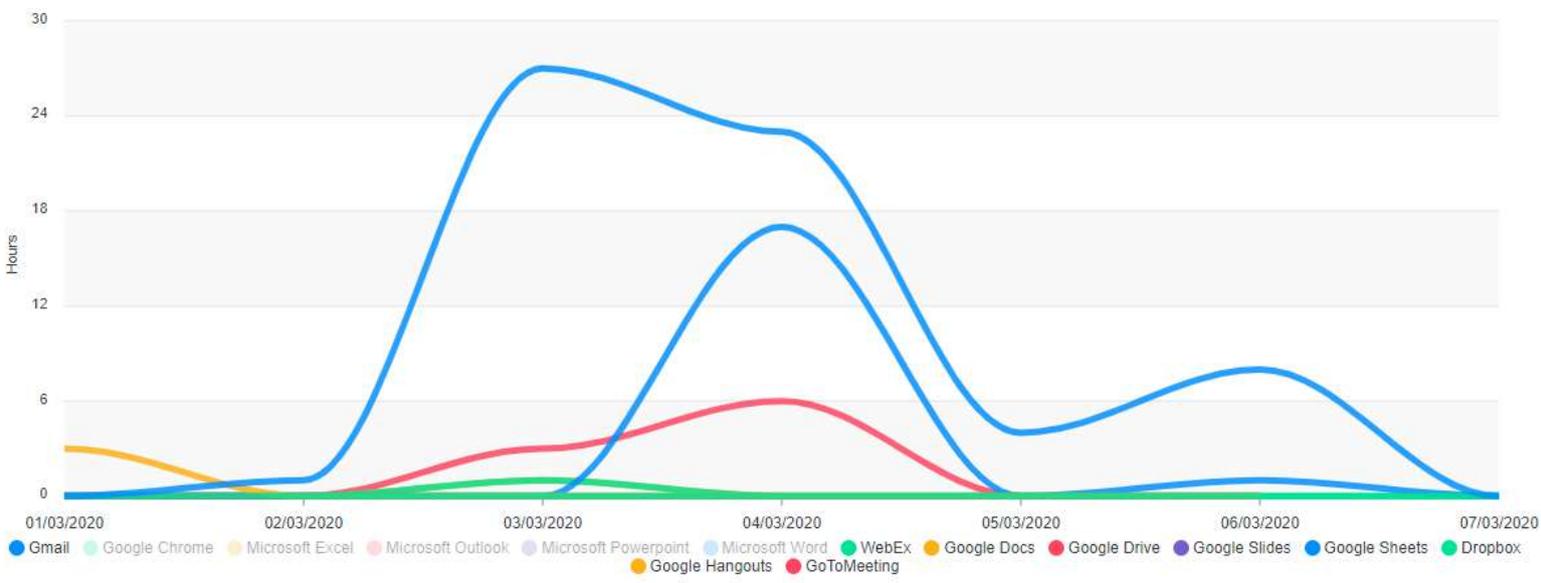

## WHAT IS RPM?

Softwatch Remote Productivity Monitoring solution (RPM) provides managers with the visibility into their workers' productivity by analyzing the time workers use enterprise applications on a daily basis, and with initial insights on potential rightsizing opportunities for such applications.

## WHY NOW?

Covid-19 has scattered a large portion of the global workforce and forced thousands of businesses to struggle with new challenges associated with the unplanned shift to an almost total remote work environment. A critical challenge for management is how to monitor the productivity of their remote workers, while maintaining their privacy.

## HOW DOES IT WORK?

To help companies address the challenge, Softwatch is leveraging its patented technology and introduces the innovative Remote Productivity Monitoring (RPM) solution to enable monitoring of remote workers and office teams. It collects and analyzes the time workers spend on enterprise applications so that managers can assess the work productivity of its employees on a daily basis while also respecting their privacy.

According to Gartner , 74% of CFOs plan to increase remote work rather than having everyone return to an office.

RPM works with offline, online, hybrid & home developed applications and monitors a predefined set of such applications determined by the customer

RPM analyzes app usage quietly in the background, avoiding the creation of an overly-intrusive, privacy-invasive work environment

RPM helps managers to obtain initial insights on potential rightsizing for enterprise applications

RPM methods are industry proven and are based on experience in serving hundreds of enterprise customers worldwide

## ABOUT SOFTWATCH

Softwatch is a leader in Transition Management and Application Usage analytics. The company's SaaS solution enables enterprises to effectively manage the transition of business applications to the cloud, optimize their hybrid cloud environment and reduce software spending. Softwatch holds patents for its software usage and user segmentation solutions.
